

Term scoring

$n = 1,515,300$ filings

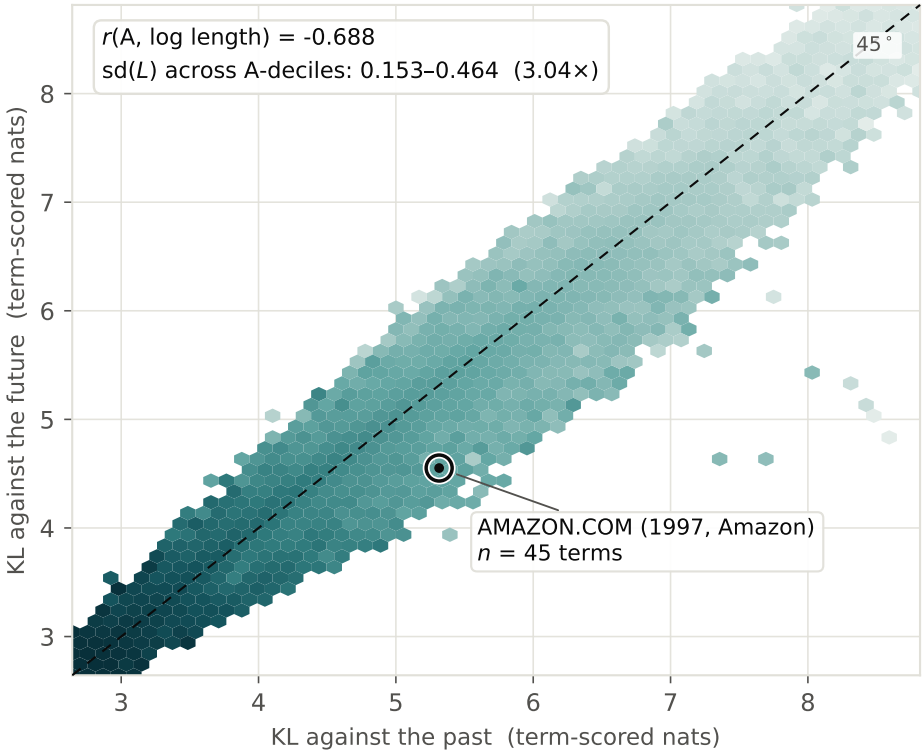

Topic scoring (T = 200)

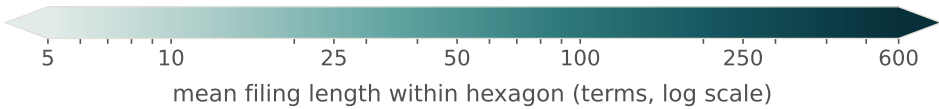

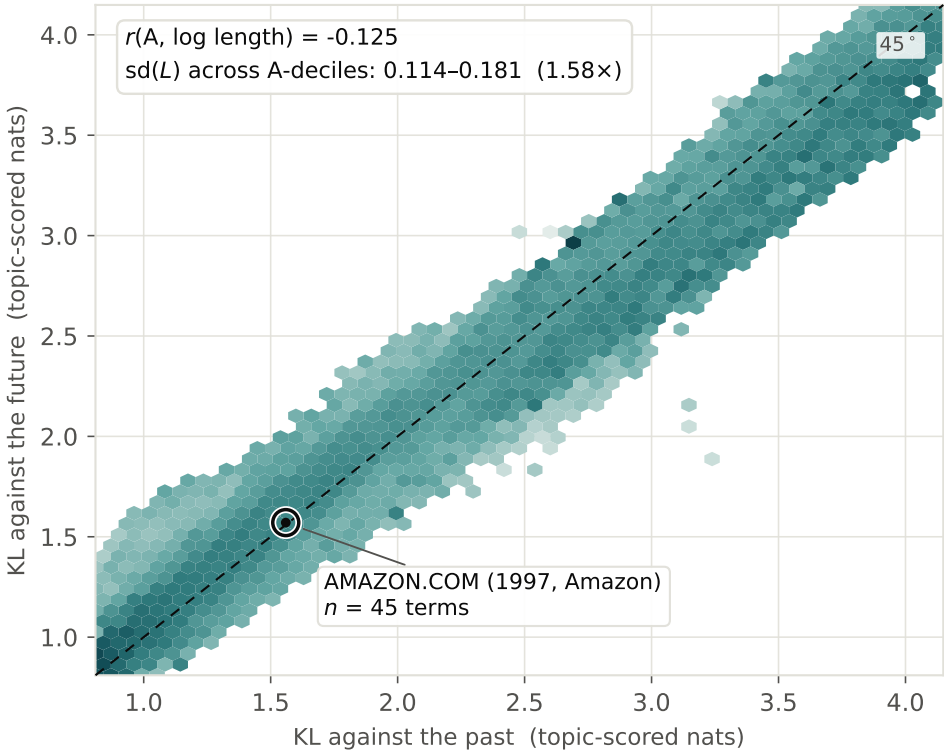

$n = 978,968$ filings

$n = 1,261,047$ filings

$n = 834,578$ filings

Hexagons holding fewer than 25 filings are left blank; the retained hexagons still cover over 99.4% of filings in every panel.

The colour scale is shared by all four panels. The axis ranges are not: each panel is boxed on its own 0.5th–99.5th percentiles, and term-scored and topic-scored KL do not share a scale — the comparison invited across columns is of shape and colour gradient, not of raw magnitude.
