

Vocabulary position and survival at the first Section 8 use-proof gate

registrations 2002-2017, the cohorts whose first gate has fully elapsed; cell rates shrunk toward an empirical-Bayes prior estimated from the spread of the cells themselves

Software & Electronics (class 009)

362,027 filings | base 46.18% | 282 cells | prior sd 4.76pp, $\nu=109$

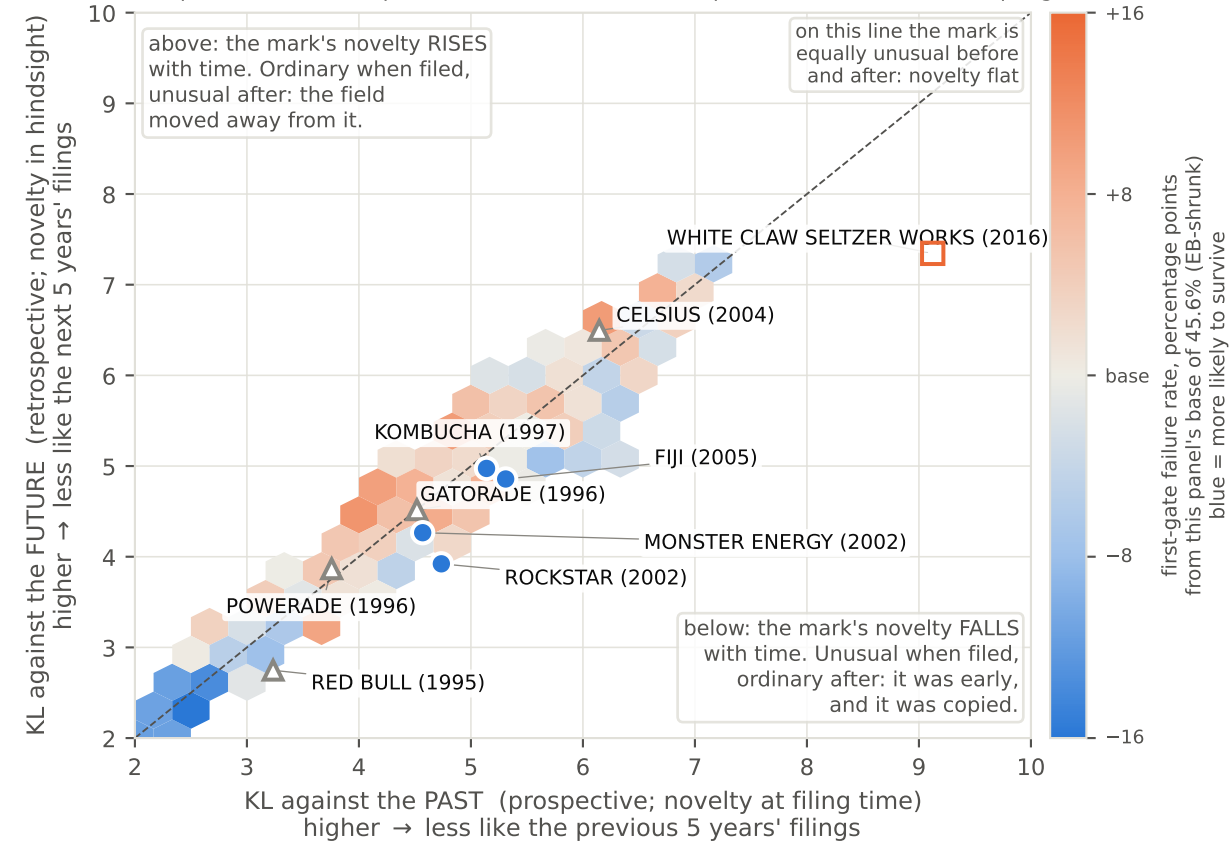

median cell pulled 22% to the prior, the smallest 91%; raw spread 2.8x clustered sampling noise

Beer & Soft Drinks (class 032)

25,869 filings | base 45.65% | 68 cells | prior sd 6.98pp, $\nu=50$

median cell pulled 28% to the prior, the smallest 72%; raw spread 1.9x clustered sampling noise

- named mark: survived the gate
- △ named mark: not classifiable (unregistered or gate not yet elapsed)
- named mark: failed the gate
